

Tailwind

Assignment

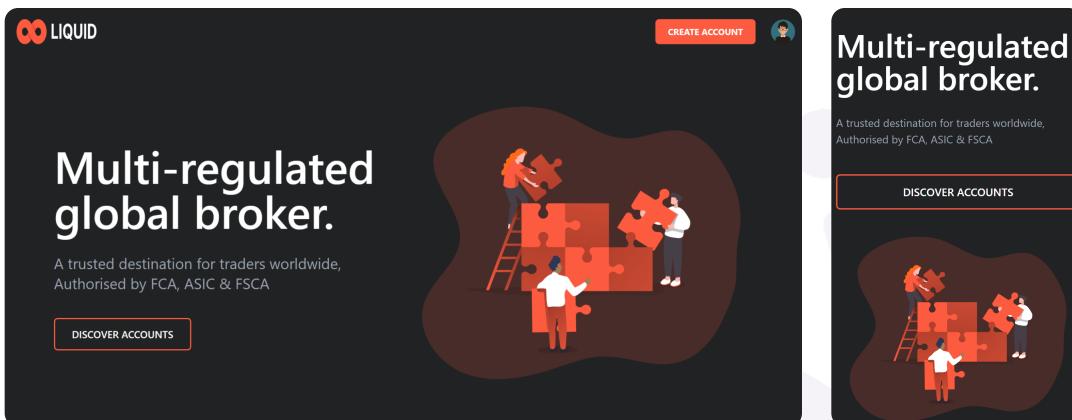

Assignment

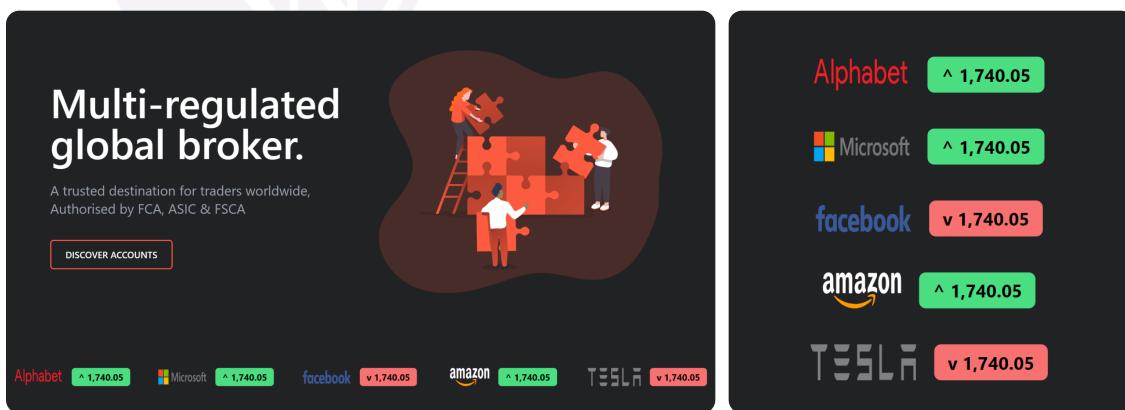

Q1. Let's say we need to design a website for a stock market broker website. You are tasked with creating a landing page for a stock market broker website. Your team lead has assigned you the initial responsibility of designing a straightforward navigation bar. Note that there should be no custom CSS and the output must be achieved only using Tailwind CSS.

Q2. Building upon the previous assignment, you now have to create a hero section for the landing page. This section should be eye-catching and grab the visitors' attention. Take a look at the image below for reference.

Q3. In continuation of our previous task, where we successfully created a hero section for a landing page designed for a stock market broker, it is now time to showcase some statistical information. Below are the reference images for your convenience.

Q4. Building upon the previous task, it is crucial to incorporate informative blogs into a stock market webpage. For this assignment, we will focus on adding blog cards to enhance the content. Below are the reference images for your convenience.

Assignment

Q8. Moving forward with our previous assignment, we now have a coding challenge to design the final component of the landing page, which is the footer section. Below are some reference images to guide us.

Q9. Now, let's focus on incorporating animations into our landing page. For this assignment, your task is to add a bounce animation to the "Discover Account" button and a pulse animation to the "Steps to Get Started" section.
